SERVICE • SCIENCE • ASSURANCE

PURPOSE

ALS Geochemistry is the world's most trusted testing service dedicated to high-value geologic data support for the exploration and mining community. ALS is committed to supplying verifiable, traceable, and defensible data using reliable testing methods and effective data-workflow solutions for our clients.

Mine Site Laboratory Services

No matter how remote, on-site laboratories are digitally connected to the ALS lab network allowing for unparalleled monitoring.

Supply of mine site labs:

- › Containerised preparation facilities
- › Customised analytical laboratories and methods

Core services in-lab or on-site:

- › Core sawing & sampling
- › Core photography
- › Hyperspectral mapping & interpretation
- › CoreViewer™

Key features that set ALS's laboratory information management system (LIMS) above competitors are:

- › Global interconnectivity to allow for offsite quality management and oversight.
- › Webtrieve™ access for real-time tracking and monitoring.
- › Client specific Application Program Interfaces (API) to automate routine data transfer tasks.
- › Process Control Alerts™ to monitor routinely collected and analysed samples.
- › Overlimit Alert™ for notifications when results trigger a user defined overlimit assay.

Partnering with ALS on a mine site laboratory project provides peace of mind that design, commissioning and daily laboratory operations will be completed to the high standards characteristic of ALS.

Advances in Technology

Fire Assay for Gold

ALS brings new, advanced technology to an ancient method. With the implementation of in-house developed technology, significant precision and accuracy improvements have been achieved.

- › **Consistent and low detection levels**, down to 1 ppb Au
- › **Interference free and robust** for variable sample matrices.
- › **Applicable** to all scales of projects from exploration to mining.
- › **Flexible capacity**, easily scalable as demands change.
- › **Useful** assays on fully pulverized samples that allows for additional analyses.
- › **Reliable** outcomes regardless of climate extremes or remoteness.

ALS Method	Sample size (g)	Detection limit (ppm)
Au-ICP21	30	0.001
Au-ICP22	50	0.001
Au-AA23	30	0.005
Au-AA24	50	0.005
Au-AA25	30	0.01
Au-AA26	50	0.01

Unrivalled Detection Limits

ALS continues to lead the way with innovations in ICP-MS methodology to provide leading edge detection limits for gold and key pathfinder elements; allowing for superior discrimination of anomaly versus background.

Aqua Regia Au + Multi-element Methods with new, improved Industry Leading Detection Limits

Methods	Sample size (g)	Analyte	Detection limits (ppm)
AuME-ST43™ AuME-ST44™	25 50	Au	0.0001
		As	0.01
		Bi	0.0005
		Re	0.0002
		Se	0.002
		Te	0.001
		Tl	0.0005

Lowest Detection Limits for Au from Cyanide Leach / ICP-MS

Methods	Sample size (g)	Analyte	Detection limits (ppm)
Au-CN43™	25	Au	0.00002
Au-CN44™	50		

ALS's lowest Au detection limit is possible due to the stability of Au-CN complexes coupled with ICP-MS instrumentation optimised for Au sensitivity.

Selected analytes listed. See page 16 for full multi-element listing.

Digital Solutions

to Simplify Your Life

Build a bridge between Webtrieve™ and your data repository with a customised API (Application Program Interface) for routine data transfer.

- › Real time data loading with no need to check for updated data.
- › Reduced requirement for production staff to load new results.
- › Standardised workflow
- › Automated sample submittal directly to ALS.
- › Extra security for sensitive data

An API is a software intermediary that makes it possible for application programs to interact with each other and share data.

Contact your local client services representative to arrange for a meeting to discuss options.

Sample tracking at your fingertips with the **ALS Geochemistry App**

Track samples and receive alerts with the ALS Geochemistry App that includes:

- › **Process Control Alert™** where user-defined limits can be set up to monitor grade control, mill processing and environmental samples. An out of bound result prompts an alert so that the situation can be addressed quickly.
- › **Overlimit Alert™** delivered by SMS and/or email when a sample triggers an overlimit assay. Results available graphically with overlimits highlighted.
- › **Dashboard** with workorder progress.
- › **Geochem results**, workorder info and mine control data.
- › Access to the Geochemistry **Schedule of Services and Fees**.
- › **Lab locator** and contact info.

CUTTING EDGE

Hyperspectral Imaging & Processing

TerraCore is the only company in the industry with commercially available LWIR spectral imaging as well as the standard VNIR & SWIR spectral range to deliver the full spectrum required for rock characterisation. Results are delivered via CoreViewer™ and IntelliCore®.

CODE	DESCRIPTION	PRICE
Various	Core cleaning, core box preparation, and labour may be provided by ALS or TerraCore.	By Quotation
COREIM-10 COREIM-11 COREIM-12	VNIR-SWIR or SWIR hyperspectral imaging of core boxes and chip trays using TerraCore Core Imaging Systems. Pricing applies to in-lab services.	\$6.40 / foot \$20.80 / metre \$5.75 / chip sample
COREIM-10L COREIM-11L COREIM-12L	LWIR and VNIR-SWIR hyperspectral imaging of core boxes and chip trays using TerraCore Core Imaging Systems. Pricing applies to in-lab services.	\$8.55 / foot \$28.10 / metre \$8.10 / chip sample

*Minimum charge of \$6750.00

Skeletonised core boxes have custom pricing. Please enquire.

*Chip trays must be black plastic. ALS can transfer samples to black trays for a fee.

Services include **high resolution true colour RGB core photographs**, mineral assemblage maps and spectral parameters as image displays, numerical mineralogical parameters and products averaged over 10cm intervals across the length of the core.

aiSIRIS™ by AusSpec brings a generational leap forward in AI interpretation of TerraSpec® spectral data. Systematic collection of spectral data on dry, coarse crushed rock and drill core can be easily integrated with existing workflows with routine interpretation enabling delivery of large volumes at fast turnaround times.

CODE	DESCRIPTION	DELIVERABLES	PRICE PER SAMPLE
HYP-PKG	An economical package combining TerraSpec® 4 HR scanning and aiSIRIS™ expert spectral interpretation. The value of hyperspectral mineralogy in exploration and geometallurgy increases substantially with larger sample volumes. Discounts are available for large submittals covering entire drilling campaigns.	Raw spectral files in ASD or ASCII format, and spreadsheet with mineral assemblages and spectral parameters related to the project geology.	300 samples minimum* \$6.40
INTERP-11	Rapid and accurate interpretation of hyperspectral scans by the aiSIRIS™ expert software.	Spreadsheet with mineral assemblages and spectral parameters related to the project geology.	300 samples minimum* \$3.95
TRSPEC20	Spectral scan using the TerraSpec® 4 HR spectrometer. Crushed reject or RC chips are recommended as the optimal sample type.	Raw spectral files in ASD or ASCII format.	\$4.30

*Discounts may apply for higher volumes of samples.

The original ASD files as well as the aiSIRIS™ output are reported on every sample for one-to-one comparison.

Contact client services to arrange for access to the aiSIRIS™ App.

More information about aiSIRIS™, TerraSpec® and TerraCore can be obtained from any ALS client services group.

Sample Preparation

Sample preparation is designed to produce a representative, homogenous sub-sample from the original raw sample. Many variations on the methods and packages in the following pages are available, and sample preparation schemes can be customised to suit any particular project requirement. We have a wide range of expertise available within ALS to help you with any questions you might have.

Samples may be submitted to any of the locations listed on the back pages of this schedule. We can also offer advice on shipping to any of our laboratories by ground, air cargo and air express.

Sample submission forms are available online from alsglobal.com and on request.

Core Services

Our Core Services encompass core handling and warehouse management, core sawing and sampling, and core photography, all within secure and comfortable logging facilities. They may be bundled in any combination at ALS facilities or on-site at your project as needed. These prices reflect in-lab services; for custom on-site quotes, please contact minesitelab@alsglobal.com.

Our highly-trained core sawing technicians use state of the art computerised saws for precision cutting of most rock types. Friable core may be sawn manually to preserve material in the interval.

CODE	DESCRIPTION OF SERVICE	PRICE / UNIT
LOG-COREBX	Log in core box for processing.	\$2.35 /box
SAW-01 SAW-01FT	Automated high speed core sawing. Cut sheet/details provided by client.	\$10.50 /m \$3.30 /ft
SAWM-01 SAWM-01FT	Manual sawing for friable core. Cut sheet/details provided by client.	\$13.50 /m \$4.10 /ft
SAM-COR01	Sampling core based on client instructions. Includes bagging sample for further preparation.	\$4.30 /sample
SAM-COR01F	Surcharge for friable core. Sampling core based on client instructions. Includes bagging sample for further preparation.	\$5.95 /sample
LOG-COR10	Daily rental of secure core logging facilities with full spectrum lights and other amenities.	\$62.40 /day
PHO-WET PHO-DRY	High resolution core photography. Delivery via secure file transfer or ALS CoreViewer™ (see below). Core may be photographed wet or dry based on client preference and requirements.	\$4.65 /box
STO-COR10	Long-term storage of core boxes in ALS warehouses.	\$1.30 /box/month

CoreViewer™

Photo archive, core logging support tool, and data integration platform. Integration with major 3D modelling software.

CoreViewer™ is a fast and secure core photo archive, core logging support tool, and data integration platform accessible over the web via computers and touch-screen tablets.

Using core photos taken by ALS or provided by you over a secure connection, we create continuous depth-registered downhole core image strips. The box photos and core strips are available to you through CoreViewer™, where you can search for specific intervals and graph any kind of downhole geochemical, mineralogical, or geophysical data for comparison against the images.

Your core photos can be accessed in perpetuity using your secure Webtrieve™ login. For those companies using acquire GIM Suite, CoreViewer™ is available right inside the acquire Neo application, correlated with drill holes and all associated information in the database.

CoreViewer™ also integrates with major 3D modelling software, including Sequent Leapfrog Geo, Maptek Vulcan and Micromine for deep investigation and verification of exploration, resource and geometallurgical models.

Fast & secure connection

Continuous depth-registered downhole core image strips

Search for specific intervals

Graph downhole geochemical, mineralogical, or geophysical data

CODE PRC-PHOCLW & PRC-PHOCLD | PRICE \$5.75/box

Sample Submission

Confidence and security in the chain of custody for your samples as they pass through our system are paramount. Your samples are given a barcode and logged into our proprietary global laboratory information management system on receipt. We encourage clients to barcode samples prior to sending them to our laboratories. Our system will accommodate all major barcode formats.

Sample pick-up services

May be arranged from any of our locations. Please contact your nearest ALS office and mention **code PKP-21**.

CODE	DESCRIPTION	APPLICATION	PRICE PER SAMPLE
BAT-01	Workorder/administration fee applied per processing batch.	Single charge for each batch of samples processed.	\$31.55 /processed batch
LOG-21	Samples received with barcode labels attached to sample bag. Multi-part barcoded sample tags may be purchased from your local lab.	Weigh raw sample and log into global tracking system.	\$0.75
LOG-22	Samples received without barcode labels attached.		\$1.45
LOG-23	Pulps received with barcode labels attached to sample bag.	Weigh pulp and log into global tracking system. At least one out of every 50 samples is selected at random for routine QC tests (LOG-QC). The default specification is 85% passing 75 microns.	\$0.75
LOG-24	Pulps received without barcode labels attached.		\$1.45
LEV-01	Levy for disposal of all types of laboratory waste.	Required for relevant samples in certain jurisdictions.	\$0.80
QAR-01	Quarantine charge. AQIS-approved heat treatment and storage.	Required for relevant samples imported into Australia. Additional charges apply for samples over 500g.	\$0.85

Sample Storage

Materials submitted for analysis are retained free of charge at our laboratories for a limited time, starting from the day we issue the final Certificate of Analysis. Reasonable monthly charges will apply to samples archived for longer periods in our facilities. ALS sample storage facilities provide a secure and organised environment protected from the elements, and all archive locations are included in the laboratory tracking system.

CODE	DESCRIPTION	APPLICATION	PRICE PER SAMPLE
STO-REJ	Monthly archive of coarse rejects.	Longer term archiving of coarse rejects and large pulps.	\$0.85 > 45 days
STO-BLK	Monthly archive of pulps >250g.		
STO-PUL	Monthly archive of pulps <250g.	Longer term storage of master pulps.	\$0.40 > 90 days
STO-SCR	Monthly archive of screening reject fractions.	Longer term storage of screening reject fractions.	\$0.40 > 45 days
RET-21	Handling and retrieval of archived samples.	Stored samples.	By Quotation
DIS-21	Disposal of pulps and coarse fractions.	Pulps and coarse fractions.	By Quotation
RTN-21	Return of samples to client.	Returned samples.	By Quotation

Specific Gravity & Bulk Density

Specific gravity and bulk density of ores are important parameters that are often under-characterised in the determination of grade and tonnage of deposits.

CODE	DESCRIPTION	RANGE	PRICE PER SAMPLE
OA-GRA08	Specific Gravity on solid objects.	Reported as a ratio.	\$14.20
OA-GRA08b	Specific Gravity on pulps using pycnometer.	Reported as a ratio.	\$14.20
OA-GRA09	Bulk Density by water displacement.	0.01 – 20g/cm ³	\$14.20
OA-GRA09A	Bulk Density after wax coating (wax removal not included).	0.01 – 20g/cm ³	\$22.70

Drill Core, Rocks and Chips Preparation Packages

All packages include sample login to the laboratory tracking system and weighing. Excessively wet samples may require additional drying for a surcharge. It is very helpful to advise us of mineralised samples that may require special equipment cleaning cycles.

CODE	DESCRIPTION	APPLICATION	PRICE PER SAMPLE
CRU-21	Coarse crushing of rock chip and drill samples.	Used as a preliminary step before fine crushing of larger sample sizes. No QC is performed for this method. If QC if required request CRU-21q for >70% passing 6mm.	\$3.20 + \$0.65 /kg
PREP-31*	Crush to 70% less than 2mm, riffle split off 250g, pulverise split to better than 85% passing 75 microns.	Drill core, rock and chip samples.	\$8.70 + \$0.95 /kg
PREP-31Y*	Crusher/rotary splitter combo - Crush to 70% less than 2mm, rotary split off 250g, pulverise split to better than 85% passing 75 microns.		\$8.70 + \$0.95 /kg
PREP-31B*	Crush to 70% less than 2mm, riffle split off 1kg, pulverise split to better than 85% passing 75 microns.		\$10.00 + \$0.95 /kg
PREP-31BY*	Crusher/rotary splitter combo - Crush to 70% less than 2mm, rotary split off 1kg, pulverise split to better than 85% passing 75 microns.		\$10.00 + \$0.95 /kg
PREP-31D*	Crush to 90% less than 2mm, riffle split off 1kg, pulverise split to better than 85% passing 75 microns.		Drill core and rocks containing high-grade or coarse gold and/or silver.
PREP-22*	Coarse crush sample, pulverise entire sample to better than 85% passing 75 microns.	Drill core, rock and chip samples up to 3kg.	\$11.40 + \$0.35 /kg
PREP-32*	Crush to >70% less than 2mm, riffle split, pulverise 1.5kg to 85% passing 75 microns.	Drill core, rock and chip samples.	\$12.75 + \$1.30 /kg

* Packages with common split size and particle fineness are listed. Please contact your local client services for alternatives.

Individual Sample Preparation Procedures

The following procedures can be used either separately or combined in a package in order to meet specific needs regarding sample size and composition. Most of these procedures are charged at a rate that is based on sample weight.

Multiple screen sizes and screening methods are available. Please contact your local client services group for options.

A variety of different pulverising bowls made of diverse media are available on request. All ALS equipment is standardised as low Cr-steel, however, substitution of bowls may be required when specific element contamination is a concern. Bowls available include tungsten carbide, agate and zirconium.

Other options are available for all stages of sample preparation. Please contact ALS with your specific requirements.

Drying

CODE	DESCRIPTION	APPLICATION	PRICE PER SAMPLE
DRY-21	Drying of excessively wet samples in drying ovens.	Default drying procedure for most rock chip and drill samples.	\$2.90 + \$0.65 /kg
DRY-22	Drying of excessively wet samples in drying ovens that are controlled to a maximum temperature of 60°C.	Most soil and sediment samples that are analysed for volatile elements.	\$3.05 + \$0.70 /kg
DRY-23	Air-drying of samples.	Selective Leach procedures and others.	\$3.05 + \$0.70 /kg

Crushing

CODE	DESCRIPTION	APPLICATION	PRICE PER SAMPLE
CRU-21	Coarse crushing of rock chip and drill samples.	Used as a preliminary step before fine crushing of larger sample sizes. No QC is performed for this method. If QC if required request CRU-21q for >70% passing 6mm	\$3.20 + \$0.65 /kg
CRU-31	Fine crushing of rock chip and drill samples to 70% passing 2mm.	Standard preparation procedure for samples where a representative split will be pulverised.	\$3.20 + \$0.60 /kg
CRU-36	Fine crushing of rock chip and drill samples to 85% passing 2mm.	Option for when a finer crush is desired.	\$3.60 + \$1.20 /kg
CRU-32	Fine crushing of rock chip and drill samples to 90% passing 2mm.	Option for when a finer crush is desired.	\$4.25 + \$1.40 /kg

Note: Methods with common fineness requirements listed. Additional options available.

Splitting

CODE	DESCRIPTION	APPLICATION	PRICE PER SAMPLE
SPL-21*	Split sample using a riffle splitter.	Standard splitting procedure.	\$2.15 + \$0.45 /kg
SPL-22*	Split sample using a rotary splitter.	Rotary splitting procedure.	\$3.20 + \$1.10 /kg
SPL-22Y	Split sample using a Boyd crusher/rotary splitter combination.		\$2.15 + \$0.45 /kg
SPL-34	Split a received pulp sample for various analysis.	Pulp splitting procedure.	\$0.85

*Note: For sample splitting and return or archive without analysis add suffix X to the codes above. Additional costs are incurred.

Pulverising

CODE	DESCRIPTION	APPLICATION	PRICE PER SAMPLE
PUL-31*	Pulverise a split or total sample up to 250g to 85% passing 75 microns.	Default procedure for samples that are finely crushed and split to 250g or less.	\$5.10
PUL-32*	Pulverise a 1,000g split to 85% passing 75 microns.	Large sample size to mitigate nugget effect.	\$7.25
PUL-32a*	Pulverise a 1,000g split to 90% passing 75 microns.		\$8.80
PUL-21*	Pulverise entire sample to 85% passing 75 microns.	Appropriate for samples up to 3kg.	\$11.70
PUL-23*	Pulverise up to 3kg to 85% passing 75 microns. For samples >3kg additional costs are incurred to split the sample prior to pulverising and retaining the remainder.	Appropriate for RC drill chip samples not requiring crushing.	\$8.60
PUL-24*	Pulverise up to 3kg to 85% passing 75 microns. For samples >3kg an additional cost is incurred to split the sample prior to pulverising. The remainder is discarded.		\$8.60
PUL-51*	Pulverise up to 100g concentrate sample to 85% passing 75 microns.	Cost includes careful cleaning of the pulverizing bowl after grinding.	\$21.30
PUL-34*	Pulverise 200g to 85% passing 75 microns.	Applicable for high grade material.	\$21.30

* Surcharges may apply to samples requiring excessively long pulverisation times required for some sample types.

Soil & Sediment Preparation Package

Drying temperature is kept low to avoid the loss of mercury.

CODE	DESCRIPTION	PRICE PER SAMPLE
PREP-41	Dry at <60°C/140°F, sieve sample to -180 micron (80 mesh). Retain both fractions. Application: Soil or sediment samples.	\$1.85 /sample +\$3.05 /kg

Clay Separation

The clay fraction in soils acts as a trap for elements migrating to the surface from depth, and may be used to enhance subtle anomalies.

CODE	DESCRIPTION	PRICE PER SAMPLE
SCR-CLAY	Separation of the -10 micron fraction from soils. Minimum 300g of sieved soil required.	\$24.30

Note: Clay samples may require drying and screening (-180 micron or -106 micron) prior to clay separation on the minus fraction. Please discuss suitable options for your program with local client services staff.

Miscellaneous Procedures

These procedures may be used when specialised preparation or sample compositing is required. An hourly labour charge may apply to time-intensive projects.

CODE	DESCRIPTION	APPLICATION	PRICE / UNIT
CMP-21	Compositing of two or more samples. May be done by volume/core length (CMP-21) or by weight (CMP-22).	As requested.	\$2.45 /sample
CMP-22			\$4.65 /sample
WSH-21	Clean crushers with "barren" material after each, or designated samples..	As required. Barren material inserted between samples as an additional cleaning step between mineralised samples.	\$2.75 /sample
WSH-22	Clean pulverisers with "barren" material after each, or designated samples.		\$3.60 /sample
TRA-21	Transfer sample to drying tray or new sample bag.	As required for samples received in containers unsuitable for laboratory storage, or requiring tray drying.	\$1.45 /sample
BAG-01	Bagging large pulps for storage.	For large pulps/bulk masters.	\$1.45 /sample
HOM-01	Homogenise stored or composited samples by light pulverizing.	As required.	\$6.35 /sample
SCR-51	Screening of samples to any number of standard size fractions, as specified by the client. Weight of undersize fraction reported for each screen size.	Fraction sizing or custom screening as requested.	\$7.10 /screen size

Portable XRF on Prepared Pulps

ALS offers portable XRF analysis on pulps immediately after sample preparation at the prep lab closest to your project. **15g sample required for pXRF analysis.**

CODE	ANALYTES & LOWER LIMITS (PPM)	PRICE / SAMPLE
pXRF-30	As 50 Ca 0.5% Cr 100 Cu 50 Fe 0.5% Mn 100 Ni 50 Pb 50 S 0.1% Zn 50	\$5.40
pXRF-34	Portable XRF scan of an unmineralised pulverised sample. Ranges: Si 0.5%-47% Ti 0.1%-60% Zr 5ppm-5%	\$4.05

*pXRF methods available as an add-on to multi-element analysis only.

Portable XRF for Indicative Analysis

Portable XRF is useful for screening large numbers of intermediate to ore grade elements quickly and cost effectively while awaiting standard lab analyses. It can also be used to determine Si and acid-resistant Ti and Zr as a complement to multi-element methods and a proxy for rock characterisation.

For a successful pXRF scan it is important that calibration is matched to specific sample suites on an individual project basis to minimise inaccurate results. ALS offers custom calibration for pXRF on project-specific sample suites, with our rigorous quality standards and XRF expertise ensuring accurate, reliable results. The pXRF instrument can be located in the prep lab nearest your project, or on-site if the project is remote. Contact your local client services team for more information.

Precious Metals Analysis

The unique chemical properties of gold, silver, and the platinum group elements pose challenges in geochemical analysis. They often occur heterogeneously in geological materials, at scales ranging from micron-sized inclusions in minerals to large nuggets. As a result, large analytical charge weights are required to accurately represent content in the overall sample. Solvent digestions can also lose gold to adsorption on the original sample when certain forms of carbon and sulphide minerals are present, in a process called preg robbing.

ALS has decades of expertise in reliable and reproducible precious metals analysis by fire assay, cyanide leach and aqua regia digestion at parts per billion to percent levels.

Please submit at least three times nominal sample weight for efficient service.

Gold by Fire Assay

An optimal fire assay flux recipe and rigorous quality control program easily handle problem materials including chromite, base metal sulphides and oxides, selenides, and tellurides.

Choice of crushing fineness, splitting technique and pulp size can all affect the analytical outcome of fire assay gold methods. Discuss with your local ALS laboratory for more information.

CODE	ANALYTE	RANGE (ppm)	DESCRIPTION	PRICE PER SAMPLE
Trace Level				
Au-ICP21	Au	0.001-10	Au by fire assay and ICP-AES.	\$19.25
Au-ICP22			30g sample	\$22.70
Au-AA23		0.005-10	Au by fire assay and AAS.	\$18.50
Au-AA24			30g sample	\$22.00
Ore Grade				
Au-AA25	Au	0.01-100	Au by fire assay and AAS.	\$19.25
Au-AA26			30g sample	\$22.70
Au-GRA21		0.05-10,000	Au by fire assay and gravimetric finish.	\$24.00
Au-GRA22			30g sample	\$29.05

Metallic Screening

When samples contain coarse gold, the metallic screening procedure is recommended for accurate results.

CODE	ANALYTE	RANGE (ppm)	DESCRIPTION	PRICE PER SAMPLE
Au_SCR21	Au	0.05-100,000 (0.01-1000 mg)	1kg pulp screened to 100 microns. Other screen sizes available. Duplicate 30g assay on screen undersize. Assay of entire oversize fraction.	\$64.05
Au_SCR24	Au		1kg pulp screened to 100 microns. Other screen sizes available. Duplicate 50g assay on screen undersize. Assay of entire oversize fraction.	\$71.05
Au_SCR24B	Au		1-2kg pulp screened to 100 microns. Duplicate 50g assay on screen undersize. Assay of entire oversize fraction.	\$96.65
Au_SCR24C	Au		2-3kg pulp screened to 100 microns. Duplicate 50g assay on screen undersize. Assay of entire oversize fraction.	\$122.05

* Options available for various sample weights, screen sizes and undersize assays.

Silver

Trace level and low-grade silver samples may be analysed by acid digestion for maximum sensitivity and precision. Multi-element packages including Ag are listed in the Targeted Exploration section.

Because silver can suffer from nugget effect, occasional duplicate analysis may help detect sampling error at these low levels. At higher grades, fire assay with larger nominal weights may be preferable.

CODE	ANALYTE	RANGE (ppm)	DESCRIPTION	PRICE PER SAMPLE
Trace Level				
Ag-ICP41 (Ag-AA45)	Ag	0.2-100	Ag by aqua regia digestion and AAS. 0.5g sample	\$7.25
Ag-ICP61 (Ag-AA61)		0.5-100	Ag by HF-HNO ₃ -HClO ₄ digestion, HCl leach and AAS. 0.25g sample	\$9.95
Ore Grade				
Ag-OG46 (Ag-AA46)	Ag	1-1,500	Ag by aqua regia digestion, ICP-AES or AAS finish. 0.5g sample	\$12.75
Ag-OG62 (Ag-AA62)		1-1,500	Ag by HF-HNO ₃ -HClO ₄ digestion with HCl leach, ICP-AES or AAS finish. 0.4g sample	\$15.70
Ag-GRA21		5-10,000	Ag by fire assay and gravimetric finish.	\$25.50
Ag-GRA22			30g sample 50g sample	\$30.45
ME-GRA21	Au	0.05-10,000	Au and Ag by fire assay and gravimetric finish.	\$31.30
ME-GRA22	Ag	5-10,000	30g sample 50g sample	\$36.20

Platinum Group Elements

Platinum, palladium, rhodium and gold may be determined by standard lead oxide collection fire assay and ICP-MS or ICP-AES finish. For the full list of platinum group elements, nickel sulphide collection fire assay must be used for a quantitative analysis.

CODE	ANALYTE	RANGE (ppm)	DESCRIPTION	PRICE PER SAMPLE
Trace Level				
PGM-MS23L	Pt Pd Au	0.0001-1 0.0002-1 0.001-1	Super trace Pt, Pd and Au by fire assay and ICP-MS finish. 30g nominal sample weight	\$25.75

Gold Cyanidation

In mining and exploration applications, cyanide leach tests are used to establish the potential cyanide extraction efficiency for gold and silver.

High concentrations of some sulphides, particularly chalcopyrite, can negatively impact gold extraction. For samples that are expected to contain high copper sulphide concentration please contact ALS for suggestions.

CODE	ANALYTE	RANGE (ppm)	DESCRIPTION	PRICE PER SAMPLE

Note: Cyanide disposal fees apply in some countries. For Super Trace Au with cyanide leach see methods on page 16.

Process Samples

Includes gold in cyanide liquors or captured on activated carbon.

Minimum sample weight required varies, contact your local lab.

CODE	ANALYTE	RANGE (ppm)	DESCRIPTION	PRICE PER SAMPLE
Au-AA16	Au	0.001-2,500mg/L	Au in cyanide liquor by extraction with AAS finish.	\$25.55
Au-AA44	Au	1-10,000	Au on carbon by ashing, aqua regia digestion and AAS. Duplicate analysis.	\$45.45

Bulk Leach Extractable Gold

BLEG is used where cyanide leaching from a stream sediment sample may detect gold anomalies that would otherwise go unnoticed.

Prices for cyanide leaching of samples over 1kg by quotation.

CODE	ANALYTE	RANGE (ppm)	DESCRIPTION	PRICE PER SAMPLE
Au-CN12* Au-AA12**	Au	0.0001-10	BLEG – ICP-MS finish. BLEG – extraction AA finish. Up to 1kg sample	\$42.65
Au-CN11* Au-AA11	Au	0.001-10	BLEG – ICP-MS finish. BLEG – extraction AA finish. Up to 500g sample	\$28.50

* Silver and copper may also be reported by these methods for an additional fee.

** Silver, Copper, Lead and Zinc may also be reported for an additional fee.

Super Trace Gold and Multi-Element in Soils & Sediments

ALS offers the lowest detection limits in the industry for gold in soils and sediments by both cyanide and aqua regia digestion, using our innovative super trace analytical methodology.

Full multi-element geochemical suites may be read from the same digest solution as our aqua regia and ICP-MS super trace gold method. This package mirrors our ME-MS41L™ method, with slight adjustments made to accommodate the larger nominal sample weight necessary for representative gold analysis.

CODE	ANALYTE	RANGE	DESCRIPTION	PRICE PER SAMPLE
Au-CN43™	Au	0.02ppb-1ppm	Au by cyanide extraction with ICP-MS finish.	\$23.80

Low Level Gold and Multi-Element in Soils & Sediments

Our trace level methods by aqua regia digestion and ICP-MS finish are excellent for regolith, where gold anomalies indicating mineralisation below surface are well-characterised. Aqua regia dissolves native gold as well as gold bound in sulphide minerals; however, depending on the composition of the soil, gold determined by this method may or may not match recovery from fire assay methods.

As with our super trace methods, multi-element packages can be read from the same digestion solution as trace level gold for a complete exploration tool.

Generative Exploration

All of the ICP-MS methods listed in the following section involves some aspect of our innovative methodology for super trace analysis. Detection limits have been pushed orders of magnitude below average crustal abundance for the majority of elements, enabling excellent precision at geochemical background levels and clearly defined geochemical anomalies. Digestion methods appropriate for any sample medium are available - soils, sediments, regolith, vegetation, water, rocks, and drill core. ALS remains committed to solving long-standing analytical challenges in exploration geochemistry by making use of new instrumentation and fresh ideas from our team of expert analytical chemists and geochemists.

Please submit at least three to four times the nominal sample weight for efficient service.

Four Acid Super Trace Analysis

This super trace package is suitable for regional drilling, trenching and hand samples in unmineralised rocks, and can also be used effectively in areas of thick regolith for bedrock mapping. ALS has lowered the detection limits on key pathfinder elements such as As, Sb, Se and Tl to near or below average crustal abundance, revealing anomalous patterns at levels previously unattainable due to technical limitations.

The rare earth elements and lead isotopes are available as add-ons to expand the utility of the method in greenfields exploration.

Portable XRF for Litho geochemistry

The crucial litho geochemical elements - silicon, titanium, and zirconium - may be added to any ALS four acid method for a more complete element suite.

CODE	DESCRIPTION	PRICE PER SAMPLE
pXRF-34	Portable XRF scan of an unmineralised pulverised sample. Ranges: Si 0.5%-47% Ti 0.1%-60% Zr 5ppm-5% 15g sample	\$4.05 <i>Add-on to multi-element analysis only</i>

Aqua Regia Super Trace Analysis

Aqua regia digestion with super trace ICP-MS analysis provides extremely low detection limits for the analysis of soils and sediments; useful for regional and deep cover exploration.

The rare earth elements and lead isotope concentrations add new dimensions to super trace data. REEs may be useful pathfinders despite reflecting only the labile component, while Pb isotopic signatures can be used in fingerprinting and hydrothermal fluid history.

Other Selective Leaches

In addition to Ionic Leach™, ALS offers a variety of standard partial leaches targeting particular soil fractions. They can be done individually or in sequence to best suit project needs.

Minimum sample size is 5g for each leach or for any combination in sequence.

Please enquire for more details.

Hydrogeochemistry

Water that has interacted with rock will take on trace elements which are then transported with the water, producing a larger footprint diagnostic of that rock. Where collection of traditional media such as soils is difficult or impossible such as in swamps, in areas with significant transported cover, and areas where invasive sampling is not possible, hydrogeochemistry provides a direct detection tool on the same scale as stream sediment sampling.

ALS offers multiple reliable and cost-effective water analysis packages to suit your exploration program.

Trace elements and metals analyses require at least 50mL of water.

Au requires a minimum of 100mL of water. Anions and physical parameters require a minimum of 150mL of water.

Please contact ALS for information on sampling methodology and preservation if needed. Sampling kits may be purchased at some locations, please enquire.

CODE	DESCRIPTION	PRICE PER SAMPLE
WAT-PREP02	Filter water samples to <0.45um and acidify with nitric acid before analysis. Required when field filtering and acidification has not been performed.	\$5.80
WAT-PREP03	Filter water samples to <0.45um before analysis. Required when water has not been filtered before submittal.	\$3.85
WAT-PREP04	Acidify water samples with nitric acid before analysis. Required when samples have not been acidified before submittal.	\$2.00
WAT-PREP05	Chemical treatment of water samples to desorb Au from containers before analysis.	\$3.00

Biogeochemistry

Plants selectively absorb trace elements from soil, bedrock and water at depth and incorporate them into their tissue. Analyses of plant tissues can therefore be used as a large-scale geochemical sampling device in areas where the rocks of interest are covered by transported cover and non-prospective lithologies. Careful selection of plant species, tissue type and growth age are important factors to be considered as the geochemical response will vary with these factors.

ALS provides multiple digestion and preparation methods for explorers using this sample media. Preparation methods can include the separation of the tissue of interest from other plant parts, milling and ashing.

Ashing results in the concentration of many elements of interest to explorers and when calculated back to the original pre-ashed weight has the effect of dropping detection limits of many elements by an order of magnitude. Please contact your local lab to discuss your specific project goals.

CODE	DESCRIPTION	PRICE PER SAMPLE
VEG-MILL01	Milling of dry plant tissue to 100% passing 1mm. Produces a homogenous and representative pulp that can be subsampled for analysis.	\$9.45
VEG-ASH01	Vegetation sample is ashed at 475°C for 24 hours. Pre- and post-ashing weights are reported. Average ash yields are 2-4% for species commonly used in exploration surveys. Minimum recommended sample weight is 100g.	\$9.45

Targeted Exploration

No single method covers all types of geological materials for all geochemically-relevant elements at all concentrations. Sample type, commodity of interest, geochemical pathfinders and expected concentration of target elements should all be considered when selecting appropriate methods for your project.

Broadly, aqua regia readily dissolves many sulphide, oxide and carbonate minerals, as well as retaining mercury, a particularly volatile element. Four acid digestions quantitatively dissolve nearly all minerals, but it may sometimes be necessary to use even stronger techniques such as fusions in order to fully digest barite, rare earth oxides, and tin, tungsten, niobium and tantalum minerals.

The choice between various instrument finishes should be informed by the expected concentrations of the elements of interest in the sample.

**Please submit at least four times
the nominal sample weight for
efficient service.**

Aqua Regia With ICP-MS Finish

Method selection can be key to achieving exploration success. Sample type, target commodity, and pathfinder elements should all be considered when selecting the most appropriate method for your project.

Aqua regia is an excellent exploration tool for various deposit types that involve gold, silver and base metals hosted in sulphide and carbonate minerals.

Four Acid Digestion With ICP-MS Finish

Four acid digestion quantitatively dissolves nearly all minerals in the majority of geological materials. However, barite, rare earth oxides, columbite-tantalite, and titanium, tin and tungsten minerals may not be fully digested.

Despite the potentially incomplete digestion of REEs, the leachable portion of these elements may hold important exploration vectoring information and can be chosen as an add-on.

Loss On Ignition

LOI measures the content of a sample lost as gases when subjected to high temperatures, often including water and CO₂. Many more temperatures and ignition times are available, please enquire.

CODE	ANALYTES & RANGES (%)	DESCRIPTION	PRICE PER SAMPLE
OA-GRA10	H ₂ O (Moisture)	Gravimetric procedure after drying at 105°C. 2 hours (normal samples).	\$17.10
OA-GRA11		24 hours (hygroscopic samples). 5g sample	\$17.95 <i>QAQC samples inserted for monitoring</i>
OA-IR06	H ₂ O + (Water of Crystallization)	Combustion furnace and infrared spectrometry. 1g sample	\$17.10
OA-GRA05xf	LOI @ 500°C	Loss on Ignition at 500°C after sample is pre-dried at 105°C. 1g sample.	\$14.20
OA-GRA05	LOI @ 1000°C	Loss on Ignition at 1000°C on an as received basis. 1g sample.	\$10.05

Stable Isotopes

Many important parameters of mineralising fluids may be determined from stable isotope ratios. The isotopic alteration halo may extend beyond visible mineralogy changes, creating a larger deposit footprint for easier exploration vectoring.

CODE	ANALYTE	DESCRIPTION	PRICE PER SAMPLE
LS-ISTP01	C and O in Carbonate Minerals MDRU Mineral Deposit Research Unit	Offered in partnership with the Mineral Deposit Research Unit (MDRU) at the University of British Columbia. Carbon and oxygen isotopic composition is determined specifically on carbonate minerals in whole-rock pulps using laser spectroscopy. 0.5g sample	\$39.35
O-ISTP01	O and H in Silicate Minerals	Specific to clays and silicate minerals. Determination using a complex gas collection procedure and IRMS. Sample must be supplied as a single-mineral separate. TAT is 30 days.	\$140.00 <i>each</i>
H-ISTP01			
S-ISTP01	Sulphur	Specific to sulphide and sulphate minerals. Determination using TC/EA and IRMS. Sample must be supplied as a single-mineral separate. TAT is 30 days.	\$72.00
CO-ISTP01	Carbon and Oxygen	Specific to minerals containing carbon and/or oxygen. Determination using acid digestion and IRMS. Sample must be supplied as a single-mineral separate. TAT is 30 days.	\$52.00

Pb Isotope Ratios For Exploration

This fast, low-cost analysis of Pb isotope ratios in pulps allows fingerprinting of different lithologies and hydrothermal fluid flow pathways, providing a new vector to ore deposits.

CODE	ANALYTE	DESCRIPTION	PRICE PER SAMPLE
PbIS-RAT41	Six isotope ratios including ²⁰⁴ Pb, ²⁰⁶ Pb, ²⁰⁷ Pb, and ²⁰⁸ Pb isotopes	Pb isotope ratios by acid digestion and ICP-MS analysis. Total Pb content of the sample is required in advance. May be run on whole rock pulps. 0.5g sample	\$38.15
PbIS-RAT61		For Aqua Regia Digestion request PbIS-RAT41 For Four Acid Digestion request PbIS-RAT61	\$41.75

NOTE: Samples must contain >2ppm Pb for analysis to be viable

Radiogenic Isotopes

These methods provide insight into provenance and character of hydrothermal fluids and rock genesis, helping unravel geological history for a more sophisticated understanding of your ore body.

CODE	ANALYTE	DESCRIPTION	PRICE PER SAMPLE
Pb-ISTP01	Pb/Pb	May be done on whole rock pulps or on specific Pb-bearing minerals. Measurement by acid digestion and HR-ICP-MS. Samples may require Hg separation at an additional cost. TAT is 30 days.	\$335.00
Nd-ISTP01	Sm/Nd	Performed on whole rock pulps. Measurement by column separation and HR-ICP-MS. Total Sm and Nd content is required in advance. TAT is 30 days.	\$613.00

Geochronology

These methods may be used to date the ages of specific minerals, hydrothermal alteration events, and emplacement of volcanic-plutonic units. Age constraints on important events can help refine the deposit model and identify alteration that did not contribute to mineralisation.

Sample sizes required for most isotopic analysis methods vary depending on mineralogy and purpose; please contact client services for more information.

CODE	ANALYTE	DESCRIPTION	PRICE PER SAMPLE
Ar-ISTP01	Ar/Ar	Done on targeted minerals. Rock and drill core should be submitted intact or crushed only, as sample prep is included in the price. Measurement by irradiation and step heating in a mass spectrometer. Price includes sample preparation. Turnaround time approximately 12 months.	\$1,934.40
Re-ISTP01	Re/Os	Specific to molybdenite. Rock or drill core must be received whole as steel jaw crushing will contaminate the sample with Re. Age can only be determined for rocks of >0.5 Ma, and the molybdenite separate must contain >100ppm Re. Price includes mineral separation, solvent extraction, column separation and TIMS analysis. TAT is 70 days.	\$1,954.95
U-ISTP02 U-ISTP03	U/Pb	U-Pb dating by LA-ICP-MS of igneous rocks using zircon and monazite. Age of the sample is reported. Analysis includes a standard set of 30 elements, including REE. Price includes preparation of up to 1kg of sample. U-Pb dating of detrital grains by LA-ICP-MS. Age probability distribution in the sample is reported. Analysis includes a standard set of 30 elements, including REE. Preparation of 2kg of sample included in price.	\$980.00 /20 grains* \$1,625.00 /60 grains*

* larger numbers of grains can be analyzed at an increased cost.

Mineral Chemistry

ALS has partnered with CODES Analytical Laboratories, at the University of Tasmania, to provide state of the art mineral analyses for exploration, mining and metallurgical applications.

CODES
Analytical
Laboratories
CODES

CODE	ANALYTE	DESCRIPTION	PRICE PER SAMPLE
LA-MIN	Laser ablation mineral analyses	Quantitative analyses of in situ minerals. Advantage of small spot size (15-80 micron). Trace and major element compositions are reported.	\$40.00 /analysis
MIN-MOUNT	Mineral mounts	Preparation of 25 mm round mounts for in-situ mineral analyses in rock samples (no crushing, mineral separation and grain mounting).	\$54.00 /mount
SEM-IMG	Grain imaging	CL imaging of grains for isotopic dating using SEM. Cost dependent on number of grains or amount of time taken for mineral relationship imaging.	\$145.00 /30 grains
PREP-THINP PREP-THINS	Thin section preparation	Preparation of thin sections for both reflected light microscopy and SEM analysis, and for transmitted light microscopy only.	\$108.00 per section/ Reflected light, SEM \$54.00 per section/ transmitted light

Whole Rock Analysis, Litho- geochemistry, Sulphur and Carbon

The investigation of geological and ore forming processes is enhanced by targeted lithogeochemical analyses that are often carried out on a sub-set of samples during a thorough geochemical program. They are used to fully characterise rock type, along with trace element changes due to metamorphism, alteration and mineralisation. As there is no single analytical method that can fully define the full range of elements that are required for effective lithogeochemical investigations, ALS offers packaged combinations of analytical methods most appropriate for every element and designed to provide comprehensive information for, essentially, complete rock characterisation.

A wide variety of sulphur and carbon minerals and compounds are often found associated with ore deposits. These minerals can impact ore processing and how waste can be stored during mining. Identifying what form these elements are present in has important implications for ore and waste characterisation. These methods are also powerful tools when combined with large geochemical data sets for geometallurgy investigations.

Please submit at least four times the nominal sample weight for efficient service.

Whole Rock Analysis

Both X-Ray fluorescence (XRF) and ICP-AES instrument finishes can be used effectively for the major rock-forming elements following a fusion. These methods are not suitable for samples with base or precious metals mineralisation.

Specific commodities such as iron ore, bauxite, and base metal sulphides should be analysed with packages designed for those sample types. Please see the Ores & Commodities section for more whole rock analysis options.

CODE	ANALYTES AND RANGES (%)								DESCRIPTION	PRICE PER SAMPLE
ME_XRF26* 2g sample	Al ₂ O ₃	0.01-100	Fe ₂ O ₃	0.01-100	Na ₂ O	0.01-10	SrO	0.01-1.5	Fused disc XRF, LOI by furnace or TGA	\$35.50

*For mineralised and/or high sulphide content >4%, please request ME-XRF15c.

Both the ME_XRF26 and ME_ICP06 packages include LOI by furnace or TGA.

Trace Elements by Li Borate Fusion

A lithium borate fusion prior to acid dissolution and ICP-MS analysis provides the most quantitative analytical approach for a broad suite of trace elements. Options for adding the whole rock elements from an ICP-AES analysis on the same fusion, or base metals from a separate four acid digestion, are available.

CODE	ANALYTES AND RANGES (ppm)								DESCRIPTION	PRICE PER SAMPLE

Complete Characterisation Packages

By combining a number of methods into one cost effective package, a complete sample characterisation is obtained. These packages combine whole rock analysis, trace elements by fusion, aqua regia digestion for the volatile trace elements, carbon and sulphur by combustion analysis, and several detection limit options for the base metals.

Other method combinations are available for complete characterisation. Please enquire with your local client services team for more information.

These packages are suitable only for unmineralised samples. To add gold analysis, please see the Precious Metals section.

Minimum sample size is 10g.

Sulphur Methods

Accurate sulphur speciation can be crucial to early identification of recovery and environmental issues on many projects. Variations on the most common speciation methods can be implemented to suit your project's specific mineralogy; please contact client services in your region for more information.

CODE	ANALYTES & RANGES (%)		DESCRIPTION	PRICE PER SAMPLE
S-IR08	S (Total)	0.01%-50%	Total sulphur by induction furnace/IR 0.1g sample	\$17.10
S-GRA07	S (Elemental)	0.01%-100%	Solvent leach with remaining elemental sulphur analysed by gravimetric finish. 3g sample	\$38.30
S-GRA06a	S (Sulphate)	0.01%-50%	HCl (15%) leach of soluble sulphates, precipitation as barium sulphate and gravimetric finish. Note: little to no dissolution of barite/celestite. 1g sample	\$31.30
S-IR06a	S (Sulphide)	0.01%-50%	HCl (25%) leach to remove sulphates; induction furnace/IR. Note: little to no dissolution of barite/celestite. 0.1g sample	\$22.70
S-GRA06	S (Sulphate)	0.01%-40%	NaCO ₃ leach of sulphates, precipitation as barium sulphate and gravimetric finish. 1g sample	\$35.50
S-IR07	S (Sulphide)	0.01%-50%	NaCO ₃ leach of sulphates, induction furnace/IR. 0.1g sample	\$35.50

Carbon Methods

Carbon has important metallurgical and environmental implications for many types of mineral deposits. Carbonates may consume acid, impacting leach process design and mine waste remediation, while preg robbing by organic carbon can interfere with the cyanidation of gold and silver ores.

CODE	ANALYTES & RANGES (%)		DESCRIPTION	PRICE PER SAMPLE
C-IR07	C (Total)	0.01%-50%	Total carbon by induction furnace/IR. 0.1g sample	\$17.10
C-IR06a	C (Non-Carbonate)	0.01%-50%	HCl (25%) leach at high temperature for 1 hour to evolve carbonates with analysis by induction furnace/IR. 0.1g sample	\$22.95
C-GAS05	CO ₂ (Carbonate)	0.2%-50%	HClO ₄ digestion and CO ₂ coulometer. 0.1g sample	\$24.00
C-IR18	C (Graphite)	0.02%-50%	HCl (50%) leach of carbonates, roasting to remove organic carbon, induction furnace/IR. 0.1g sample	\$36.95
C-IR17	C (Non-Carbonate)	0.02%-100%	Slow and repeated addition of HCl (50%) to volatilise inorganic carbon phases; induction furnace/IR. 0.1g sample	\$35.50
C-CAL15	C (Carbonate)	0.02%-100%	Carbonate carbon calculated by difference. Requires C-IR07, C-IR17.	\$0.00

Sulphur and Carbon Packages

These elements are often determined together, so ALS provides several economic packages for convenience.

CODE	ANALYTES & RANGES (%)		DESCRIPTION	PRICE PER SAMPLE
ME-IR08	C (Total) and S (Total)	0.01%-50% 0.01%-50%	Total carbon and sulphur by induction furnace/IR. 0.1g sample	\$23.75
ME-IR06a	C (Organic) and S (Sulphide)*	0.01%-50% 0.01%-50%	Non-Carbonate carbon and sulphide sulphur by HCl (25%) leach to remove carbonates and sulphates, induction furnace/IR. 0.1g sample	\$31.75

*Sulphide sulphur may be overstated if BaSO₄ or SrSO₄ are present as they are insoluble with the HCl leach.

Specific Ores & Commodities

Procedures for the evaluation of ores and high grade materials are optimised for accuracy, precision and recovery of the target element. No single digestion or analytical method is suitable for all cases, and ALS provides a wide variety of procedures so the most appropriate method can be selected. Choices include acid digestions with ICP-AES finish; fusion and XRF determination for resistive elements and bulk commodities; specialised solvent digestions for uncommon ores; and classical volumetric methods for very high grade base metals.

**Please submit at least four times
the nominal sample weight for
efficient service.**

Copper Mineral Selective Leaches

These methods may be performed alone or in sequence to semi-quantitatively identify potential recovery by various ore processing methods. ALS can also provide custom methods based on metallurgical requirements.

CODE	ANALYTES & RANGES (%)		DESCRIPTION	PRICE PER SAMPLE
Cu-AA04	Cu	0.01-10	Citric acid leach and AAS finish. 0.25g sample	\$14.20
Cu-AA05	Cu	0.001-10	Sulphuric acid leach and AAS finish. 1g sample	\$14.20
Cu-AA07n	Cu	0.001-100	Sulphuric acid/Na sulfite leach and AAS finish. 1g sample	\$14.20
Cu-AA08q	Cu	0.001-100	Sulphuric acid/ferric sulphate leach and AAS finish. 1g sample	\$15.25
Cu-AA17	Cu	0.001-10	Cyanide leach and AAS finish. 2g sample	\$20.65
Cu-PKG06LI	Cu	Various	Sequential leach for oxide, sulphide and residual Cu. Various options available. 1g sample	\$42.65

Total Copper

Aqua regia is an effective solvent for copper oxides and sulphides, but copper occurring with other commodities like molybdenum can be analysed by four acid digestion for consistency across data sets.

CODE	ANALYTES & RANGES (%)		DESCRIPTION	PRICE PER SAMPLE
Cu-ICP41	Trace Cu	1-10,000 ppm	Aqua regia digestion and ICP finish. 0.5g sample	\$7.25
Cu-ICP61	Trace Cu	1-10,000 ppm	Four acid digestion and ICP finish. 0.25g sample	\$9.95
Cu-OG46	Cu Assay	0.001-50	Aqua regia digestion and ICP finish. 0.4g sample	\$12.75
Cu-OG62	Cu Assay	0.001-50	Four acid digestion and ICP finish. 0.4g sample	\$15.70
Cu_SCR21	Native Cu	0.01-100	Screen 1kg sample to 100 microns, duplicate assay on 0.25g of undersize fraction and assay of entire oversize fraction by four acid digestion and AAS finish.	\$138.50
Cu-VOL61	Cu Concentrate	0.01-100	HNO ₃ -HCl-HF-H ₂ SO ₄ acid digestion followed by titration. Cu-CON02 done in duplicate. 2g sample	\$49.75
Cu-CON02				\$85.30

Iron Ore Analysis

Lithium borate fusion and XRF finish is the industry method of choice for the analysis of oxide iron ores. Single or multi-temperature LOI is available, customisable as required.

CODE	ANALYTES & RANGES (%)						DESCRIPTION	PRICE PER SAMPLE

OA-GRA05x ME-GRA05	Loss on Ignition 1g sample						Furnace or Thermogravimetric Analyser (TGA)	

Davis Tube Recovery

ALS recommends discussion to determine optimum protocol for your particular ore type. Grind curve confirmation tests, laser sizing, cyclosizing and wet screening are also available.

CODE	DESCRIPTION	PRICE PER SAMPLE
DTR_PREP	Multi-stage sieving and pulverising.	\$62.65
DTR_REC	Wash time and mass recovery.	By Quotation
WT_DTR	Weight of DTR fractions.	By Quotation
DTR_FeRec	DTR iron recovery.	By Quotation
ME_XRF21h/c/t	XRF analysis on various DTR fractions (head, concentrate, tailing). 0.7g sample each	\$51.50 <i>each</i>
OA-GRA05xh/xc/xt	Loss on Ignition reported as part of this method.	
Fe-VOL05	Ferrous iron by titration (FeO; 0.01-100%). 1g sample	\$25.30
MAG-DTR	Recovery of magnetic fraction by DTR	\$41.60
MAG-SUS	Magnetic susceptibility.	\$14.15

*Note: These methods are not suitable for samples with base or precious metals mineralisation.

Bauxite Analysis

XRF is the industry-standard analytical method for bauxite analysis. Results are reported on a dry weight (110°C) basis by default. Additional characterisation methods such as organic carbon, reactive silica and available alumina comply fully with CETEM performance criteria. Multi-screen sizing to determine the optimum screen size for recovery and subsequent wet beneficiation are also available.

CODE	ANALYTES & RANGES (%)							DESCRIPTION	PRICE PER SAMPLE		
ME_XRF13u (unnormalised)	Al ₂ O ₃	0.01-100	MgO	0.01-40	SrO	0.01-1.5		Fused disc XRF. 0.7g sample.	\$51.50 LOI included as part of this procedure

Trace Level Lithium Exploration

Lithium hosted in pegmatites and jadarite can occur with economic grades of rare earths and other trace metals such as boron and cesium. A sodium peroxide fusion is required for complete recovery in these deposits.

Silica is not reportable by ME-MS89L due to the use of HF during digestion and interaction with glassware. Si and elements from ME-ICP81 may be added to ME-MS89L for an additional fee.

Lithium In Sedimentary Deposits

In many cases, aqua regia provides better recovery of Li than four acid digestions due to complex chemical reactions. Roasting samples prior to four acid digestions, particularly hectorite, may mitigate this effect.

CODE	ANALYTES & RANGES	DESCRIPTION	PRICE PER SAMPLE
Li-ICP41	Li 10ppm-1%	Aqua regia and ICP-AES finish. Multi-element package also available. 0.5g sample	\$7.25
Li-ICP61	Li 10ppm-1%	Four acid and ICP-AES finish. Multi-element package also available. 0.25g sample	\$9.95
Li-OG63	Li 0.005%-10%	Ore grade Li by specialised four-acid digestion and ICP-AES finish. Best suited to Li-bearing silicate sediments. 0.4g sample	\$14.00
RST-21	Dry roasting pre-treatment	Roasting samples prior to analysis may increase Li recovery due to excess water content promoting insoluble salt formation.	\$8.60

Lithium Brines

ALS analyses brine samples after settling of suspended particles. If the samples require acidification or filtration in the lab, please indicate this prominently on the sample submittal form.

CODE	ANALYTES & RANGES (mg/L)								PRICE PER SAMPLE
ME-MS14™	Li	0.01-10	Includes a suite of 46 elements relevant to brine exploration in addition to Li. Requires 50mL brine.						\$56.85

Li-BrPKG	pH, Conductivity, TDS, Alkalinity		Physical parameters and alkalinity of lithium brines. Requires 100mL brine.					\$31.20	

Uranium

ALS is qualified and experienced in handling NORM samples in every area with active uranium exploration and mining, with added lab certification in certain jurisdictions.

CODE	ANALYTE	PRICE PER SAMPLE
UEXP-PKG01	An exploration package targeted at unconformity-hosted uranium deposits where the ore is in the basin sedimentary rocks. 1g sample Includes full 62 element suite from ME-MS41™. Includes REEs and Pb isotope concentrations. ^{204}Pb , ^{206}Pb , ^{207}Pb , ^{208}Pb – 0.005-250ppm Also includes ultra-trace boron by fusion from B-MS82L. B – 5-10,000ppm	\$60.60
ME-MS61u™	Full 48 element suite from ME-MS61™, optimised for U with specific CRMs for superior quality control. 0.25g sample	\$48.05
U-XRF10*	Ore grade U assay (0.01%-15%). 2g sample	\$21.30
U-XRF15b	Ore grade U assay (0.01%- 51%). Fusion with oxidising flux. 0.5g sample	\$37.55

*For samples with >4% sulphide choose method U-XRF15b.

Ore Grade Rare Earth Elements

Many REEs occur in minerals resistant to acid digestion, so fusion is the preferred method of decomposition. ALS offers ICP-MS/ICP-AES and XRF determinations. These methods are most appropriate for known ores; see the Whole Rock Analysis & Litho geochemistry section for trace level methods.

*Na is not reportable due to the oxidising flux used in sample preparation. **LOI is required as part of the ME-XRF15c method.

XRF For Resistive Minerals

Some resistive minerals, particularly those containing Sn, W, Nb or Ta, require a fusion for complete recovery. This method is only suitable for samples with <4% sulphides.

CODE	ANALYTES & RANGES (%)								PRICE PER SAMPLE
(+)XRF10 2g sample	Ba	0.009-45	Sn	0.01-60	W			0.01-50	\$17.10 + \$4.20 /element
	Nb	0.01-10	Ta	0.01-50	Zr			0.01-50	
	Sb	0.01-50	Th	0.01-15					

+ Add element symbol as prefix to method code. NOTE: This method is suitable for elements reporting over-range by ME-MS81

ARD & Concentrates

A mine in development or production needs a specialised set of analyses for mine products, and to characterise mine waste behaviour. These include geochemical methods designed for concentrates and high-grade samples; and those used to monitor process metallurgy and umpire assay of bulk concentrates. In the following section methods developed to determine a material's acid mine drainage potential are also outlined. These methods cover a range of requirements which will vary between regions and mineralisation types.

Please submit at least four times the nominal sample weight for efficient service.

Acid-Base Accounting

Acid-base accounting (ABA), also called static testing, calculates a net neutralization potential (NNP) representing the ability of a body of rock to produce acid rock drainage or to neutralize free acid.

The choice of package will depend on the method of determining the neutralizing potential that is required by law in your region, this information can be obtained from your local regulatory agency.

Minimum sample size for all ABA packages is 100g.

Sulphide is determined by calculation in these packages. If you would prefer sulphide determined by analysis, add A to the package code. (additional cost.)

Net Acid Generation

NAG provides a quantitative estimation of the acid that can be generated by mine waste.

CODE	DESCRIPTION	PRICE PER SAMPLE
OA-VOL11	Net Acid Generation. Hydrogen peroxide is used to rapidly oxidise sulphides. NAG is reported in kg H ₂ SO ₄ /tonne at pH 4.5 and pH 7.0. 2.5g sample	\$142.05

Humidity Cells & Metal Leaching

Tests to quantify metal leaching from mine waste under meteoric conditions can range from simple shake flask analysis to long term column leaches. Many analytical options are possible on the leaches; prices will vary based on analytical package requested.

CODE	DESCRIPTION	PRICE PER SAMPLE
OA-HCTSET	Humidity cell set-up and maintenance fees.	By Quotation
OA-HCT01	Periodic analysis of humidity cell leachate. Many instrument finishes, particle sizes and sample weights are available; please enquire.	

Various Elements in Concentrates

All control assays are overseen by experienced certified assayers and analysed in duplicate at a minimum to assure quality. Umpire assays are also available – please enquire.

Precious metals in concentrates and bullion are found in the Precious Metals section.

CODE	ANALYTES & RANGES (%)	DESCRIPTION	PRICE PER SAMPLE
(+)-CON02	Zn Mo Cu Co Pb Ni 0.01%-100%	Appropriate digestion and titration or gravimetric finish. 4g sample	\$85.30 /each
As-CON01	As 0.01%-15%	Four acid digestion and AAS finish. 1g sample	\$85.30
Hg-CON01	Hg 1-10,000ppm	HCl digestion and ICP-AES finish. 1g sample	\$85.30
F-CON01	F 20-20,000ppm	KOH fusion and ion selective electrode. 0.2g sample	\$103.00

+ Add element symbol as prefix to method code. More elements are available. Please enquire.

High-Grade Multi-Element Analysis

This is a four acid multi-element procedure specifically designed for major, minor and trace elements in high-grade samples and concentrates. Extra care is taken with senior staff reviewing the results in detail.

Aqua regia/ICP-MS and oxidizing fusion/XRF options are also available.

CODE	ANALYTES & RANGES (ppm)	PRICE PER SAMPLE
ME-MS61c™ 0.4g sample	Ag 0.1-1,000 Fe 0.02%-100% Ni 2-100,000 Th 2-5,000	\$284.20

Industrial Minerals

Industrial minerals commonly have highly refractory components requiring aggressive digestions. These methods are designed to completely dissolve the analytical sub-sample, leaving no inhomogenous residual material behind.

CODE	ORE/PRODUCT	ANALYTES	DESCRIPTION	PRICE PER SAMPLE
ME_XRF26	Cementitious Materials	Al ₂ O ₃ , CaO, Fe ₂ O ₃ , K ₂ O, LOI, MgO, MnO, Na ₂ O, SiO ₂ , SO ₃ , TiO ₂ and LOI	Fusion, XRF 0.7g sample	\$35.50
ME_XRF26s	Chromite and Manganese Ore	Al ₂ O ₃ , BaO, CaO, Cr ₂ O ₃ , Fe ₂ O ₃ , K ₂ O, MgO, MnO, Na ₂ O, P ₂ O ₅ , SO ₃ , SiO ₂ , TiO ₂ and LOI	Fusion, XRF 0.33g sample	\$51.50
ME-ICP86	Limestone, Dolomite, Magnesite, Magnesia	CaO, MgO, Al ₂ O ₃ , Fe ₂ O ₃ , SiO ₂ , LOI	Fusion, ICP-AES 0.1g sample	\$50.15

ALS Mineralogy

ALS Mineralogy has a market leading position in the range and capabilities of our automated mineralogy equipment, which includes the **Mineral Liberation Analyser (MLA)**, **QEMSCAN®**, **X-Ray Diffraction**, **TIMA** and **HyLogger™**.

Quantitative mineralogical data are an essential component in a range of applications such as processing mineralogy, plant surveys, ore characterisation, precious metal and trace mineral characterisation, and geometallurgy analyses.

Access to state-of-the-art technology and a highly trained technical team ensures that your requirements are met with high-quality data fit for your purpose.

Contact us to determine methods and pricing specific for your project.

CODE	ANALYSIS	RANGE OF SERVICE
BMA	QEMSCAN Bulk Mineral Analysis	Mineral composition, elemental department and assay reconciliation.
BMAL	QEMSCAN Bulk Mineral Analysis with Liberation	Mineral composition, estimate of the liberation, elemental department and assay reconciliation.
MIN-CORE	MLA Core Plug Analysis plus Images	Mineral list and abundances by X-Ray point counting, with elemental distributions, and calculated assay; plus high-resolution images of entire surface (both greyscale and processed). Suitable for core plugs or thin sections.
MIN-GXMAP	MLA Bulk Mineral and Textural Analysis with X-Ray Mapping	XBSE analysis with additional X-Ray mapping of similar-appearing gangue or minerals of interest to improve grain segmentation (for texturally complex or finely intergrown samples)
MIN-SPL	MLA Sparse phases - Au, Ag, PGE, U minerals etc. present at ppm to ppt levels or losses of minerals of interest to tails	Data for requested minerals only - does not include bulk mineralogy data - Mineral List and relative abundances, elemental distributions, particle size and grain size distributions, mineral liberation, locking and association data, particle image line ups, - includes high resolution photomicrographs of typical minerals of interest.
MIN-XBSE	MLA Bulk Mineral and Textural Analysis	Mineral List and abundances (to <0.5 Wt%), elemental distributions, particle size and grain size distributions, mineral liberation, locking and association data, grade recovery curves, particle image line ups, assay reconciliation - includes spread sheet reporting - additional reporting options available.
MIN-XMOD	MLA Bulk Mineral Analysis by X-Ray Point Counting	Mineral List and abundances (to ~0.5-1 Wt%), elemental distributions, chemical assay reconciliation - includes basic spreadsheet reporting.
PMA	QEMSCAN Particle Mineral Analysis	Mineral composition, abundance, liberation, locking, association, elemental department and assay reconciliation. Typically includes 4-5 size fractions.
TMS	QEMSCAN Trace Mineral Search	Trace mineral characterisation includes liberation, locking, association and size. Cost is dependent on grade and desired number of grains for analysis.
XRDQ	Quantitative XRD	Fully quantitative XRD, including the quantification of the amorphous material present.
XRDSQ	Semi-quantitative XRD	Mineral abundance, normalised over the crystalline content, excluding the quantification of amorphous material.

All prices are by quotation. Please contact ALS for more information.

Additional reporting options are also available on request.

Mineralogical data available from our range of technologies include:

- Mineral species, compositions, and abundances
- Elemental department
- Mineral grain and particle size distribution
- Grain size and grain texture data
- Mineral liberation including association and locking
- Mineral grade and element grade recovery curves
- Colour-coded particle maps and minerals line-ups
- Annotated high-resolution maps and mineral line-ups
- SEM backscatter images
- SEM particle maps
- Cathodoluminescence imaging
- Mineral X-Ray and wavelength spectra summary
- XRD analyses of all crystalline materials

 Copper sulphides	 Micas
 Pyrite	 Chlorite
 Iron oxides	 Titanium minerals
 Feldspars	 Apatite
 Carbonates	 Other minerals
 Quartz

Quality Management Systems

Providing exceptional quality assays to our clients is one of the cornerstones of ALS's business model. We achieve this via a global quality program that has been strategically designed to integrate quality requirements into every process from sample preparation through analysis. It is an integral part of day-to-day activities, involves all levels of ALS staff, and is monitored at top management levels. The global quality program includes inter-laboratory test programs and regularly scheduled internal audits that meets all requirements of ISO/IEC 17025:2017 and ISO 9001:2015.

All ALS Geochemistry hub and many multi-purpose laboratories are accredited to ISO/IEC 17025:2017 for specific analytical procedures.

The physical sample preparation involving accredited test methods as listed on an analytical laboratory's ISO/IEC 17025:2017 Scope of Accreditation may be performed at that location, or at off-site sample preparation laboratories that are monitored regularly for quality control and quality assurance practices. In certain instances an ISO/IEC accreditation body may allow for these off-site sample preparation facilities to be listed on the laboratory's Scope.

* Please contact us for details regarding ISO/IEC 17025:2017 accreditation and scopes of accreditation; or ISO 9001:2015 certification at individual labs.

Open Lab™ Initiative

The Open Lab™ Initiative is about enabling complete confidence in the accuracy of data produced by ALS through transparency in the laboratory process.

Through the Open Lab™ Initiative, we provide access to all of your results in perpetuity and the ability to track sample status in real time through Webtrieve™, our on-line interface to laboratory data. Webtrieve™ also displays complete chain of custody audit trails, important QC data, and standard reference material control charts relevant to your samples. Please ask your local laboratory to have a Webtrieve™ account set up for you.

Selected Terms & Conditions

1. Terms and Conditions

Complete Terms and conditions of service are included with each service quotation provided to clients. The following lists some of the key terms and conditions that will be applicable to every quotation for work.

2. Provision of Services

- a) The Client acknowledges that it is the Client's sole responsibility to make its own assessment of the suitability for any purpose of the Services, detection limits and confidence intervals inherent in ALS's standard testing methodology, the ALS Report and its contents.
- b) If the Client requires the Services to be performed by specific test method, or requires detection limits and/or confidence intervals different to those inherent in ALS's standard testing methodology, then the Client must instruct ALS of such a variation prior to ALS performing the Services.
- c) ALS may transfer samples within its laboratory network to maximise efficiencies and improve turnaround of the samples. No additional cost will be charged to the client for this service optimisation measure.

3. Fees and Payment

- a) ALS reserves the right to review prices at any time if significant changes to ALS's costs are incurred that are beyond ALS's control. Such changes may include, but are not limited to, changes in legislative requirements, Client variations to sample numbers, analytes requested, turnaround required, or reporting requirements.
- b) Payment terms, subject to approved credit, are payment in full, 30 days from the date of invoice (Due Date), unless otherwise agreed in writing prior to the placement of an order or submission of samples.
- c) All prices quoted by ALS are exclusive of GST (or other value added tax if relevant) unless stated otherwise.
- d) All fees due and payable after the Due Date (Outstanding Amount) will be subject to the payment of interest at a rate of 1.5% per month of the Outstanding Amount from the Due Date up to and including the date of payment, unless ALS and the Client otherwise agree in writing.
- e) The Client will indemnify ALS for any fees incurred by ALS to recover the Outstanding Amount, including any solicitor fees, or collection agency fees.

4. Limitation of Liability

- a) To the full extent permitted by law, ALS excludes all warranties, terms, conditions or undertakings (Terms), whether expressed or implied, in relation to the Services, the ALS Report, or its contents. Where any legislation implies any Terms in this Agreement that cannot be modified or excluded then, such Terms shall deem to be included. However, to the full extent permitted by law, ALS's liability to the Client for any breach of any Terms that cannot be excluded by law is limited at ALS's option to the re-performance of the Services or the refund of the fee for the Services.
- b) The Client hereby releases and indemnifies and shall continue to release and indemnify ALS, its officers, employees and agents from and against all actions, claims (actual or threatened), proceedings or demands (including any costs and expenses in defending or servicing same) which may be brought against it or them, in respect of any loss (including Consequential Loss), death, injury, illness or damage to persons or property, and whether direct or indirect and in respect of any breach of any industrial or intellectual property rights, howsoever arising out of the use of, reliance on, or benefit of, the Services or any ALS Report, except to the extent that the loss, death, injury, illness or damage to persons or property was directly caused by the negligence, willful acts or omissions of ALS or its employees.
- c) Notwithstanding any other provision in this Agreement, the cumulative liability of ALS under this Agreement to the Client and any third party is limited for any claim for loss or damage whatsoever, whether arising in tort or contract or any other cause of action, to the value of the Services provided by ALS to the Client.
- d) The Client acknowledges that during the performance of the Services, any samples supplied by, or on behalf of, the Client or parts thereof may be altered, lost, damaged or destroyed. ALS will not be liable whatsoever to the Client or any third party for any samples so altered, lost, damaged or destroyed.

5. Termination

- a) ALS may suspend or terminate its obligations under this Agreement if (a) monies payable to ALS by the client are outstanding 60 days or more (unless otherwise agreed) after the date of invoice, (b) other substantial breach by the Client of their obligations under the Agreement, which breach is not remedied within 30 days of written notice from ALS requiring the breach to be remedied, (c) by giving the Client 60 days written notice of ALS's intention to terminate.

- b) The Client may terminate its obligations under this Agreement in the event of a substantial breach by ALS of its obligations under the Agreement, which breach has not been remedied within 30 days of written notice from the Client to ALS requiring the breach to be remedied.
- c) If ALS, acting reasonably, suspects that the Client is insolvent or is having difficulties paying its debts as and when they become due, or the Client is insolvent, ALS may give written notice to the Client of ALS's intention to immediately suspend or terminate its obligations under this Agreement.
- d) In the event of termination, ALS is entitled to be paid for all work performed before the date of termination and for any unavoidable commitments entered into by ALS before the date of termination.

6. Confidential Information

- a) Neither ALS nor the Client will disclose Confidential Information of the other party to any third party without the prior written consent of the other party, unless required by law or the rules of a relevant stock exchange.
- b) ALS and the Client will only use Confidential Information of the other party for the purpose of the supply of the Services.

7. Intellectual Property

- a) All ALS Intellectual Property will remain the property of ALS.
- b) ALS grants to the Client a world-wide, non-exclusive, royalty free licence to use ALS Intellectual Property for the purpose agreed to between the Client and ALS to the extent that it is needed for the benefit of the Services.
- c) ALS Intellectual Property means all intellectual property and proprietary rights (whether registered or unregistered) owned by ALS prior to performance of the Services, developed by ALS in performance of the Services, or developed by ALS outside of, or after, performance of the Services, and without limitation includes business names, trade or service marks, any right to have information kept confidential, patents, patent applications, drawings, discoveries, inventions, improvements, trade secrets, technical data, formulae, databases, know-how, logos, designs, design rights, copyright and similar industrial or intellectual property rights.

Global Geochemistry Locations

Our integrated network of **over 70 laboratories** around the world ensures consistent quality and dependable client service wherever we might meet you.

Our services are available through any one of the many general service laboratories listed on these pages. We also provide custom services for on-site laboratory and sample preparation facilities, as well as mobile laboratories and sample preparation installations.

Visit our website for complete location details at alsglobal.com/locations
